

mophie

Distribution Center Addition

Kalamazoo, Michigan

Client Challenge

Because the company had experienced more than 500% growth over the past 5 years, the schedule to design and construct a new headquarters was not fast enough to keep up with the growing demands for mophie products. The challenge was designing and constructing a building addition on their existing facility on a compressed schedule that would allow for the expansion of packaging lines and increased shipping and receiving areas required to keep up with the increasing demand for mophie products.

TowerPinkster Solution

The TowerPinkster design team met with mophie staff to design a 37,000 square foot pre-engineered metal building addition that would house new packaging lines, loading dock, office space and toilet facilities. mophie contracted with AVB Construction of Portage, Michigan early in the process. This allowed for a project core team to make design, budget and construction decisions in an expedited manner. Because of this collaborative approach between, Owner, Contractor and Design Professional, the project was completed on time and on budget.

Size: 37,000 SF

Firm Role: **Architecture, Mechanical and Electrical Engineering, and Interior Design**
